Vladimir Melnikov

ML/DL Engineer

github.com/Vovanm88

Education

Bachelor of Computer Science Engineering, *ITMO University* 2022-2026
Relevant courses: Discrete Math, Graph Theory, Calculus, Computer Systems Architecture, Low Level Programming, Databases
Master of High-load Systems, *ITMO University* 2026-2028

Technical Experience

Senior ML Engineer **07.2026 — now**
AI-Sage

- Leading cold-start SFT for visual reasoners (VLM) and driving the continuous **SFT** → **RL** → **benchmarking** loop
- Designed and deployed proxy metrics that significantly accelerate training and evaluation cycles
- Supervising data preparation (requirements, quality review) while building production data generators and synthetic data pipelines

DL Engineer **09.2025 — 04.2026**
HappyIn

- Worked on high-quality image upscaling: convert (CPT and SFT) DDI-model to FM model and developed a tile-based upscaler, which sped up upscaling by 5 times
- Developed and trained image-to-image portrait photo retouching pipeline with triton efficient tiled and batched inference
- Developed and supported data processing pipelines using Dagster and vLLM

DL Research Engineer **06.2025 — 09.2025**
T-Bank

- Worked on the inpainting toolkit for the design team purposes
- Improved the learning pipeline; accelerated model training by 240%

ML projects mentor **02.2025 — 06.2025**
HSE Campus in St. Petersburg

- Mentoring and teaching for "Building a music recognition service" project
- Mentoring and teaching for "Pretraining Text-to-Speech model" project
- Delivered a series of mini lectures, surveys of articles and homeworks on project topics

DL Engineer **06.2024 — 04.2025**
XLabs-AI

- Engaged in image generation projects
- Implemented LoRA, ControlNet, and IPAdapter for FLUX1
- Developed custom nodes for ComfyUI (over 1.4k stars)
- Maintaining adapters for FLUX1 repository
- Supported library integration for web datasets via S3
- Developed pipelines for automated data annotation in audio diffusion models

AI Engineer **01.2024 — 06.2024**
Morpheus

- Worked on LLM for assistance and function-calling in WEB3 startup

Projects

- **Comfy UI nodes for FLUX1 and xlabs adapters** 2024
  Developing and maintaining a plugin for AI-art software
- **Optical Character Recognition for Workbooks** 2022
  Developed a pipeline (Swin-T for segmentation + CRNN for recognition) for segmenting and recognizing text in educational workbooks, enhancing the accuracy and efficiency of text extraction processes.

Skills

Tools and Languages	Python, Java, PostgreSQL, S3, JavaScript, PyTorch, Transformers, Diffusers, CUDA, Git, LaTeX, Dagster, Airflow, ClearML, MLFlow, YT
Hard Skills	DL, FM and DDIM(DDPM), classic ML, CV, NLP
Communication	Russian (native), English (B2)

Achivements

MTS Code Classification competition, winner Spring 2023
